

AQ26 - Arctic Activities

Design Arctic Goggles

The native peoples of the Arctic would often craft snow goggles to help protect their eyes from the glare of the sun reflecting off of the snow.

Challenge Beavers, Cubs, Scouts and Explorers to create their own design of snow goggles using card and string.

Test your creations by going outside on a bright day and compare how they compare to modern sunglasses.

Try different designs and size of eye slits

MAKE IT BIGGER

Using different colour document wallets, can you cut out and add a filter to the inside of your goggles to help reduce the amount of light coming through your goggles.

You can set up a torch or strong light to test which colour wallets work best, before adding to your goggles.
